

# GSA Millennium Contract

Contract No. GS00T99ALD0202

Expiration Date: Through 27 October 2009

Tasks May Extend Out to 27 October 2014

## Specifically designed for large, complex IT projects

The Millennium contract provides integrated solutions encompassing the full spectrum of Information Technology Support Services for any federal government agency. Millennium, administered by the General Services Administration (GSA) Enterprise Government-wide Acquisition Contract (GWAC) Center, is a multiple award, indefinite delivery, indefinite quantity vehicle that allows maximum flexibility at the task-order level. The contract uses a streamlined task order procurement process that allows agencies to formulate requirements and rapidly procure them through direct order-direct bill arrangements or with support from any of the GSA regional offices. The pricing options for task orders, not only include fixed prices, but also accommodate cost reimbursable ventures and other direct costs. The cost reimbursable option is particularly conducive to long-term, technically complex projects.

Information Technology services may be acquired worldwide in three functional areas: software engineering, system integration, and communications.

**Software Engineering** comprises all activities for managing software, from initial conception and planning, through design and development, to maintenance, improvement, and conversion. The general area of life-cycle software engineering can include studies related to information systems planning as well as the sizing and designing of computer systems on which new or existing software will operate.

**System Integration** comprises all activities needed to develop and deploy an automated information system. It includes the integration of technical components, such as software, hardware, and communications, and organizational components, including processes and procedures, resulting in a turnkey system. It overlaps with the other functional areas but is differentiated by its all-encompassing nature: fully operable, complete systems will be provided to the clients.

**Communications** comprises all activities for the definition, design, implementation, and management of digital and integrated or linked communications systems. Tasks may include any type of study, integration support, development, evaluation, and implementation having to do with digitized, integrated communications, including secure communications and satellite communications requirements.

## About Booz Allen

Booz Allen Hamilton has been at the forefront of strategy and technology consulting for more than 90 years. Providing a broad range of services in strategy, operations, organization and change, information technology, systems engineering, and program management, Booz Allen is committed to delivering results that endure.
