Homeland Infrastructure Foundation-Level Data to the Regions (HTTR)

The nation faces a complex and challenging information sharing environment. Emerging threats and hazards, coupled with growing interdependencies, have increased the need for coordinated processes and collaborative tools. To meet the challenges present in this environment, Homeland Infrastructure Foundation-Level Data (HIFLD) officials brought together the Defense Critical Infrastructure Sectors and the national Critical Infrastructure/Key Resources

(CIKR) Sector-Specific Agencies to capture geospatial foundation infrastructure data requirements, share geospatial information, and identify geospatial data sources that are needed to provide awareness of ongoing geospatial efforts. The HIFLD partners are capitalizing on the success of the HIFLD Working Group and exporting the capability to the Protective Security Advisor exporting the capability nationwide via the HIFLD to the Regions (HTTR) program. This regional concept is designed to directly support regional, state, and local infrastructure protection field operations and activities by providing geospatial capabilities. Developing these capabilities will strengthen federal, state, and private sector partnerships.

Their regional presence allows Booz Allen to continuously engage with client mission partners to promote domestic infrastructure information gathering, sharing, protection, visualization, and spatial analysis. Information Exchange Brokers (IEB) collaborate with and support a variety of stakeholders, including Federal, state, and local government officials.

Booz Allen Value Proposition

Booz Allen, a leading strategy and technology consulting firm, has extensive experience through our support of the HTTR program. We have the combined functional and geospatial expertise to help our clients implement their strategic vision. Our full spectrum of information sharing and data management services can help turn information strategies into programs of mutual value. Benefits to our clients include:

- **Geospatial Enablement.** Our geospatial and networking professionals have the functional expertise to provide clients with strategic, tactical, and operational information through data and mission visualization, modeling and simulation, data standardization, and stakeholder coordination.
- **Regional Working Group Development.** Booz Allen professionals provide interaction at all levels, allowing for information dissemination, development of recommendations for policy, modeling and simulation efforts, and assessment coordination for infrastructure visualization in support of emergency response missions.
- **Outreach and Awareness.** Our outreach initiatives provide support to the Homeland Security, Homeland Defense, and emergency response communities with an increased awareness of established common operational data sets for integrated views of national infrastructure and asset management.

Booz | Allen | Hamilton
 delivering results that endure

- **Planning and Project Management.** Using domain and functional expertise, Booz Allen translates guidance, organizational policies, and standard operating procedures; identifies gaps; and provides implementation requirements and program management support.

Booz Allen Service Offering

To support you in developing robust information sharing and geospatial data management programs, Booz Allen's Regional HIFLD service offerings include the following:

- Through relationships and outreach initiatives, Booz Allen's Regional HIFLD Working Groups are composed of geospatial and networking professionals, is a key component in brokering the development and acquisition for the Homeland Security Infrastructure Program (HSIP) Gold and the HSIP Freedom data sets.
- Ensure the best available, common operational geospatial data is discovered, improved, and shared among partners in the HLS, HD, and Emergency Preparedness Response and Recovery (EPR&R) communities.
- Booz Allen's staff provides the expertise to coordinate with federal, state, local, and tribal governments as well as private and commercial entities.
- Booz Allen develops and builds strong relationships through continuous outreach and awareness initiatives by developing and facilitating education and training and providing cooperative and collaboration opportunities.

Booz Allen Experience and Expertise

Booz Allen supports domestic infrastructure geospatial information sharing and protection as well as knowledge management for federal clients such as:

- **Homeland Infrastructure Foundation-Level Data Working Group.** Booz Allen's expertise and commitment in supporting partnerships and collaboration have evolved the HIFLD Working Group into the largest interagency homeland infrastructure geospatial community of interest in the United States. The Working Group membership consists of the Office of the Assistant Secretary of Defense for Homeland Defense and Americas' Security Affairs (OASD HD&ASA), the Department of Homeland Security (DHS) National Protection & Programs Directorate Office of Infrastructure Protection (NPPD OIP), Geospatial Management Office (GMO), the National Geospatial-Intelligence Agency (NGA) Office of Americas (PM), and the Department of the Interior (DOI) United States Geological Survey (USGS) National Geospatial Program Office (NGPO).
- **Other Federal Departments and Agencies.** Booz Allen has decades of combined experience weaving spatial capability into applications throughout the Department of Defense (DoD), DHS, intelligence community, civil and law enforcement agencies, and the private sector.
