Joint Force Health Protection (JFHP) in Contemporary Battlespace

Today's warfighter deploys to remote or densely populated regions worldwide, often with little or no warning. This battlespace encompasses threats to the force under conditions of extreme uncertainty. The deployed environment—whether combat or humanitarian in nature—takes into account the enemy's offensive capabilities, terrain and climate risks, occupational hazards, and, potentially, weapons of mass destruction (WMD). This complex and dynamic battlespace requires that future force warriors optimize their chances of survival through a disciplined Joint Force Health Protection (JFHP) enterprise.

The US Department of Defense's initiative to improve joint warfighting survivability through JFHP transformation and implementation offers a clear opportunity to develop a next generation healthy and fit force. Combatant commanders will achieve JFHP success through a judicious and deliberate implementation of rapid, joint, self-manned, and scalable response capabilities; integrated, early warning health protection systems; and programs that optimize human performance and maximize fighting strength.

Successful implementation of JFHP is essential to enhancing survivability on the battlefield.

Booz Allen Can Help You Be Ready for What's Next

Booz Allen Hamilton, a leading strategy and technology consulting firm, is uniquely positioned to support your deployment and readiness concerns. Our world-class defense-medical staff includes clinicians, operators, and logisticians with experience producing products for and delivering quality analyses to leaders working throughout the services.

Booz Allen understands the complexities of the JFHP domain. We recognize that service member and unit readiness is achieved only through rigorous implementation of the Health Service Support (HSS) functions of joint surveillance and preventive medicine, joint casualty management, joint theater command and control, joint patient evacuation and movement, joint logistics and infrastructure, and human performance enhancement readiness. C4ISR for health systems and other JFHP initiatives are essential to overall unit deployment readiness during pre- and post-deployment and to sustained wellness during deployment to the range of military operations. Booz Allen is also well aware of the current challenges facing the force in deployed settings across all COCOMs and services, regardless of active, guard, or reserve component status.

Representative Success Stories

Booz Allen provides JFHP support and customized solutions through a broad spectrum of service offerings. We stand ready to partner with your command to achieve JFHP transformation and implementation to meet your future force protection requirements. The range of our JFHP support and customized solutions is illustrated by our successful work on numerous JFHP client efforts, including:

- **Medical Infrastructure Response Capability (MIRC) Study.** In this engagement, we analyzed the medical infrastructure response capabilities necessary for mass casualty situations, including an analysis of the types and quantities of beds, staff, and critical infrastructure. Working closely with our client, the Office of the Assistant Secretary of Defense (Health Affairs) Force Health Protection and Readiness (FHP&R), we validated assumptions and gathered the relevant data necessary to create, execute, and analyze a medical infrastructure response capability model and produced recommendations to help our client achieve the desired end state.
- **Joint Warfighter Capability Assessment (JWCA) Weapons of Mass Destruction Study.** This task provided key decision makers with substantive modeling and simulations so they could envision future WMD conditions and make informed and actionable decisions.
- **Integrated CONUS Medical Operations Plan (ICMOP).** Booz Allen provided exercise augmentation through the use of planning tools and offered expertise in medical and logistics planning across the spectrum of conflict. Our exercise support enabled senior leadership to more readily understand the resourcing implications of suboptimal conditions.
- **Future Force Medical Structure.** Our support to the Office of the Chief of Naval Operations allowed the Navy to better develop the support infrastructure for the fleet.

Whether you're managing today's issues or looking beyond the horizon, count on us to help you be ready for what's next.
